

Prototype Vision Card 2026.03

This Vision Card outlines the desired business outcome, context, problem and vision for your new project idea. The following questions will guide technical teams in providing ball-park T Shirt sizing for the proposal. If unsure, provide your best first draft — your Business Engagement Mobilisation Partner will help you refine this after submission.

Initiative Title	<i>Websafe Upgrade (Strategic)</i>
------------------	------------------------------------

1. Business Outcome (and Value)

1.1 Desired SMART Business Outcome

Business outcomes should be measurable changes in a business metric, within a set timescale, for a clear stakeholder, and aligned to one or more strategic goals for your business-unit

Primary (SMART) Business Outcome	<i>Provide every subscriber the option to opt in / opt out to the customisable Websafe features.</i> <i>The platform needs to be scalable and made available for all existing and new VMO2 and Munro customers.</i> <i>It needs to be able support at least 6M customers from Day 1.</i> <i>It is an OFCOM regulatory requirement that every customer has access to the platform from registration.</i>
<i>The above can be derived by answering the following questions:</i>	
What type of state change/improvement must the project deliver?	<i>The project needs to upgrade the existing Websafe platform from Ver.18 to Ver.19 and must support multi-tenancy providers – VMO2 and Munro customers</i>
In which business metric?	<i>The platform needs to be saleable with the initial sizing to be based on 6M customers</i>
For which specific stakeholder or business user? <i>(Primary outcome beneficiary)</i>	<i>This is an OFCOM regulatory platform requirement. The Websafe platform must be made available through an opt in / opt out process for all customers</i>
By how much? <i>(Quantity or percentage is required)</i>	<i>The platform needs to support all existing VMO2 and new customers. In addition, it must support new Munro customers from launch and needs to be IPv6 Compatible</i>
What is the current value for this business metric?	<i>It's a Regulatory Requirement that VMO2 must comply to.</i>
Improvement must happen within what timeframe?	<i>ASAP! The project has already been kicked off in CTO and cannot complete until CIO have completed their platform upgrades.</i>
What strategic outcome does this support?	<i>This single platform will support services such as Parental Controls to all customers on the network across two ISPs. This may be a service that other Wholesale customers subscribe to in future.</i>

Prototype Vision Card 2026.03

1.2 Value case

Does this have a value case yet? <i>e.g. Have you assessed where and how much the value will be derived from this change?</i>	<i>No. This is a Regulatory Requirement. The current platform has no longer supported by the vendor and version 19 needs to be deployed to support multi-ISPs</i>
What is the approximate revenue uplift / cost saving from this?	<i>N/A</i>
Leading indicators (predictor of successful execution). <i>Suggest (if you know) what metrics will measure successful execution of this change.</i>	<i>Around 60% of the base use these controls today. All services sold will come with Websafe active by default.</i>
Key assumptions. <i>Are there any critical business assumptions?</i>	<i>There is no requirement to introduce new functionality as part of this upgrade. It needs to be a like-for-like platform as used today. Same features and settings.</i>

2. Customer and Experience Outcomes

2.1 Customer Problem (Evidence based)

Who is the primary customer (or colleague) this change is for? <i>Be as specific as possible (segment, situation, or context).</i>	<i>All customers (parents) who wish to enhance their online security for their children, to block potential harmful online content, gambling sites, sexual content and customized sites that parents deem as not suitable for their children.</i>
What customer need or problem is this proposal addressing?	<i>Addressing harmful online content and sites unsuitable for minors,</i>
What is happening today? <i>Describe what the primary customer (or colleague) experiences today, without interpreting or proposing change. What is hard, confusing, slow, risky, or frustrating today?</i>	<i>Today's platform has come to end of life and cannot support any further growth in the base. The platform is unstable. The risk is that in any event when the platform falls over, VMO2 customers / children could be exposed to content that was originally requested to be blocked.</i>
How do we know it matters to the customer?	<i>This is an important feature that is used by a large proportion of the customer base and is offered as part of the broadband proposition. Munro which will be based on a high security proposition will be relying on a very robust and stable platform.</i>
What is the problem or opportunity? <i>Explain why this current experience fails the customer or creates risk, confusion, or unmet expectations (1–3 sentences)</i>	<i>Parents are not led to child safe products that would drive additional O2 mobile connections. We are losing ground and credibility in the market vs EE and Vodafone. We are not trusted in this segment. 20% of customers contact Care/Exec Support about child safety controls.</i>

2.2 Customer Experience Outcome (Future state)

Vision summary (desired outcome). <i>In one line, what will be materially better for the customer (or colleague) if this succeeds?</i>	<i>O2 becomes the most trusted network for children's mobile safety</i>
--	---

Prototype Vision Card 2026.03

How does this differ from the current state?	<i>The current platform was designed and built to manage a single ISP, VMO2. The current platform cannot support multiple brands / ISPs. The new platform will be required to present branded splash pages notifying customers of blocked sites. These splash pages need to be hosted by branded domains – eg. www.virginmedia/websafe/siteblocked and www.O2/websafe/siteblocked urls'</i> <i>Parents will need to easily have the option to opt in / opt out of any online content blocking for their children. The options need to be the same as today so migrated customers do not lose any settings.</i> <i>Apple Private Relay is currently not supported on the current platform. On the new platform Websafe features will override any Apple Private Relay settings.</i> <i>Age-appropriate access control defaults surface early during the account set up journeys. By default, all Websafe services will be active for all customers, blocking all content unsuitable for minors until the user makes changes to the settings via MY VM or the C-App.</i> <i>Parents know that appropriate access controls will be placed on chosen devices from the outset.</i> <i>Parent account holders can manage these at any time.</i> <i>Parents are notified via e-mail when the settings have been changed.</i> <i>There should also be SMS or push notifications via the App.</i>
What will success feel like for your primary customer (or colleague)? <i>Describe behaviour, confidence, trust, ease, or outcomes.</i>	<i>"As a loving parent I want to be able to understand and select the controls that will protect my children when they use the fixed broadband service at home. I want to be able to do this from the outset when I buy or activate a new broadband service. I would like the settings to take effect as close to real-time as possible and I am notified of any changes made to my settings"</i>
Are there any journeys, workflow, or screen mockups that illustrate or support this requirement?	TBC

2.3 Journey context

Which channels and processes are in scope?	<i>New and existing MyO2 App / C-App, My VM portal under Parental guidance and controls, service activation.</i>
Which products or services are in scope?	<i>All fixed broadband services for VMO2 and Munro.</i>

3. Delivery Outcomes

3.1 Capability outcomes

What capabilities must exist to deliver the outcome? Describe the key capabilities needed (not features).

- If your proposal is on behalf of an external party such as giffgaff then your requirement scope will only cover the capabilities in VMO2 that support this third party.*

Prototype Vision Card 2026.03

- Include any critical business rules, data needs, reporting requirements, or compliance considerations
- *MVP = These requirements must be delivered by the project to achieve the minimum viable customer or commercial outcome

#	Capability	MVP*
1	<i>Capability of the blocking of all age-sensitive sites. These may be sites that parents have selected , ALL SERVICES IN PLACE TODAY ON THE CURRENT PLATFORM MUST BE AVAILABLE ON THE NEW PLATFORM.</i>	Y
2	<i>The capability for the ISP to block child and age specific sites universally via a block list that cannot be unblocked by the customer .</i>	Y
3	<i>Lists currently subscribed to are Default</i> • Pornography - Sites that contain explicit sexual content including sex toys, videos, adult services, erotic stories or descriptions of sexual acts. • Hate - Sites that promote extreme political agendas, encouraging oppression of people or groups of people based on their race, religion, gender, age, disability, sexual orientation or nationality. • Crime - Sites that offer advice on how to commit illegal or criminal activities, and sites with information about illegal use of electronic devices, hacking, fraud and illegal distribution of software. • Drugs - Sites with information on the buying, making and use of illegal recreational drugs, misuse of prescription drugs and other substances. • Violence - Sites that contain images or text depicting or encouraging physical assault against humans, animals, or institutions. Sites that are especially gruesome or contain profanity. • Hacking - Sites that give instruction or advice on how to access computer systems for the purpose of fraud, creating viruses or any other illegal theft of digital information. • Self-harm and suicide - Sites that promote or advise on how to commit self-harm or suicide. • Address hiding - Sites that give you software to mask your IP address or tell you how to hide it, so you can post or read things anonymously. • Child Abuse - Websites containing sexually explicit material involving minors. <i>Additional</i> • Cheating (Homework) - Websites that promote or facilitate cheating on homework. • Weapons - Websites that sell or describe weapons. • Alcohol and Tobacco - Websites that sell or describe alcohol and tobacco products. • Nudity - Websites containing images of nudity - including artistic nudity and naturism. • Gambling - Websites relating to, or promoting online gambling. • Chat - Websites that allow users to interact with people on messengers and chat rooms. • Social Media - Websites that allow users to interact with people and post content online in social networks. • P2P - Websites that facilitate peer-to-peer sharing of content. • Illegal Downloads - Websites that offer copyrighted material for illegal downloading.	Y

Prototype Vision Card 2026.03

	- Games - All gaming and gaming-related websites - including educational and children's games. - Online Dating - Websites providing the opportunity to establish or continue romantic relationships online.	
4	<i>The capability of the ISP to white list specific sites examples being helpsites such as childline and ISP webpages. This white list would override the Third Party List supplier's lists</i>	Y
5	<i>Capability to apply age-appropriate safety controls at service activation by default – as defined by OFCOM</i>	Y
6	<i>Capability to present a branded splash page for sites that have been blocked this must be under the related url.</i>	Y
7	<i>The capability to store settings for parents who have set up Websafe / parental controls who may wish to activate / deactivate them periodically. Doing this outside Websafe may make better efficient use of licensing</i>	Y
8	<i>The service must work with device security features such as Apple Private Relay and services that may hide the IP address.</i>	Y
9	<i>The capability for the service to be compatible with both IPv4 and IPv6 protocols through Dual Stack and DS-Lite + CGNAT configurations (currently, only IPv4 is compatible)</i>	Y
10	<i>All settings must be visible to Care Agents via iCare. Care Agents need to be able to make changes to Websafe settings and these setting changes need to be logged automatically and time stamped of the change and by who.</i>	Y
Reporting or analytics capabilities	<i>Dashboards should measure</i> <i>Proportion & trends of opt-in / opt-out for the base</i> <i>% of customers that have selected each of the available blocking services. i.e % blocking sexual content, gambling, gaming etc.</i> <i>Volume of hits for blocked sites by customer volumes and by page hits.</i> <i>The ability to identify customers attempting to access blocked sites.</i>	Y

3.2 Delivery Success Metrics. How will delivery be measured?

Type	Metric
Time to Market	<i>MVP by October for testing prior to Munro launch in Nov'26</i>
Quality target	<i>Reliability / Online Security</i>
Adoption target	<i>10-15% Increase in uptake of child products.</i>
Other (Specify)	

3.3 Service and Quality Requirements (NFRs)

What Volumes of customers or transactions must the delivery support?	<i>The platform needs to be able to support up to the full customer base of 6M customers</i>	<i>15K-25K transactions per month – Low 40-50K transactions per month – Peak</i>
---	--	--

Prototype Vision Card 2026.03

	<i>and it needs to be easily scalable.</i>	
Performance <i>Response times or availability</i>	<i>Any changes blocking / unblocking need to become effective within a 3-5 seconds of submitting a request.</i>	
Security or privacy <i>If unsure, select 'unknown'</i>	<i>Only parents / nominated household users may access and set access controls for the child device.</i>	
Compliance <i>Any legal or regulatory compliance requirements?</i>	<i>Must comply with all OFCOM regulatory requirements.</i>	
Fraud prevention <i>How must we prevent fraud?</i>	<i>Proof of Age check for registering users applying and managing parental controls is required</i>	
Auditability	<i>We must be able to evidence when, how and by whom controls are applied and changed, logs stored for at least 2 years</i>	
Accessibility / vulnerable customer requirements	<i>The journey must support vulnerable customers</i>	

3.4 Delivery Scope & Impact

Operational area	Impact? (Y/N/potential)	How might this area be impacted?
Customer facing channels		
Digital channels (web, app)		<i>Customer journeys, content, self-serve actions, login, service management</i>
Care and Retentions		<i>Contacts, case handling, scripts, troubleshooting, retention actions</i>
Commercial & go to market		
Product & Proposition management		<i>TBC</i>
Marketing & Sales		<i>TBC</i>
Order fulfilment & service changes		
Order & fulfilment		<i>N/A</i>
Service activation & configuration		<i>Provisioning, activation, defaults, service setup</i>
Supply Chain & Logistics		<i>N/A</i>
Field operations		<i>Customer installs, repairs, visits, training re-cap.</i>
Run and assure services		
Network services (mobile, fixed, TV)		<i>TBC</i>
Faults, outages & service assurance		<i>Issue detection, restoration, customer communications</i>
Service operations & support teams		<i>Operational processes, monitoring, incident handling</i>
Money, account and trust		

Prototype Vision Card 2026.03

Billing, payments & customer finance		N/A
Customer accounts, identity and permissions		Login, roles, parental controls, account hierarchies
Other		
Wholesale services & support		N/A
B2B Daisy Impact		N/A

3.5 Constraints and Dependencies

What constraints or non-negotiables must the future solution respect?	The online security services must mirror what we offer today. The blocking of sites must be consistent and reliable.
Is there anything explicitly out of scope?	We will work with the controls and child friendly services available at the time – the project scope does not include adding additional controls or tiers of access
List any known dependencies (if applicable) Leave blank if unknown	CTO platform integration.

3.5 Delivery timing

When do you want this to go live?	e.g. Commercial launch of MVP requirements Nov'26
Why must it happen then? e.g. Critical drivers for timing.	e.g. Child-friendly products and sales/upgrade experience must be ready in time for back to school. We have counted £4m revenue uplift in the 2026 budget from Q4 alone

4. Supporting Information

Has any solution assessment been done? Include links to existing solution options, blueprints, etc. that may support T Shirt sizing	CTO - completed CIO – not completed Although we do already have a set of 120+ high-level requirements that have been reviewed and agreed by stakeholders
Are there any other supporting documents or references e.g. Links to slides, customer personas etc.	Angela Tebe has this in her project portfolio

5. Governance and Ownership

Proposer	CIO / CTO – Angela Tebe
Sponsor	Broadband Product
Person accountable for the business outcome	Angela Tebe- TSA Portfolio Manager
Finance Business Partner(s)	TBC
Other stakeholders (Optional) Only include if consulted to date. e.g., Legal, Regulatory, Insights, Care, Retail Ops.	

Prototype Vision Card 2026.03

Role	Name
<i>David Christie</i>	<i>Regulatory</i>
<i>Nathan O'Brien</i>	<i>Regulatory</i>
<i>Jaquie Mellor</i>	<i>Regulatory</i>
<i>Jonathon Brown</i>	<i>Legal</i>
<i>Tan Orlando</i>	<i>Senior Broadband Product Manager</i>

6. Tracking information

What reference or ID does your business unit use to track this proposal?	<i>TBC</i>
What is the unique budget reference for the budget that is likely to fund this item?	<i>TBC</i>
Which business division will be funding this proposal?	<i>CTO / CIO + £1M under Product (Munro)</i>
Which demand forum or person within your business unit has prioritised this item as a candidate for investment?	<i>All Consumer Demand Forum for prioritization</i>
When was the priority of this idea approved as a candidate for investment?	<i>2025</i>
If known, when is this planned to attend Investment Committee?	<i>TBC</i>
Is this an NDA'd project? If so, who is the NDA contact?	<i>N/A</i>
<i>For admin use only</i>	
Date received by Business Engagement and Mobilisation (BEM) team	
Vision has been reviewed with key architects / ESA domain owners?	
Date approved for platform assessment by BEM	

Prototype Vision Card 2026.03

For information: Next steps

1. **Pre-submission checks:** An early conversation with your Business Engagement and Mobilisation (BEM) Partner is advisable. They may suggest a simpler delivery route. They may also be able to support early shaping of your vision around technical capabilities.
2. **Submission:** Once you have a potential sponsor, budget reference and priority from the person or body that prioritises demand in your division, please submit your draft Vision Card to the BEM team **[BEM team inbox to be inserted here]**
3. **Vision card review:** A Business Engagement and Mobilisation Partner will engage with you to refine and clarify important details in your vision required to obtain the best early impact assessment. The BEM partner may also drive conversations with key architects to ensure we obtain the most cost-effective recommendation ahead of sizing.
4. **T-Shirt Sizing:** When judged fit for purpose, the Vision card will be submitted for platform assessment. This will lead to an initial T-shirt-sizing, and clear ownership of delivery between TCS and TechM.
5. **Mobilisation:** Further mobilisation tasks will depend on funding status, whether the idea is in the baseline plan, and future changes to the delivery quotation process that are TBC with the new delivery suppliers.
