

Lean Vision card – Annual budget intake

This Vision Card outlines the desired business, customer and delivery outcome for your new project idea. This is a cut down version of the Vision card for annual planning purposes. The following questions will guide technical teams in providing ball-park T Shirt sizing for the proposal. If unsure, provide your best first draft — your Business Engagement Mobilisation Partner will help you refine this after submission.

Name	giffgaff:Ericsson OCS migration to Matrixx/CCS	
Where did this idea originate? <i>MVNO</i>	Strategic goal <i>MVNO</i>	Change type <i>Regulatory/Mandatory</i>

1 Business outcome

What measurable change of a key business metric are you aiming to achieve with this proposal? E.g. Reduce basket abandonment in digital for consumer PAYM by 20% by Q4 2026 to achieve sales revenue increase of +15% in 2027.

Primary Outcome (1 sentence, SMART)	Investigate, analyse, and define the requirements and solution to transition from the current Ericsson Dublin-based OCS to the VMO2 Matrixx charging platform, eliminating operational and vendor support risk for the business by the hard deadline of October 2028, aligning with the strategic charging architecture and preventing end-of-support exposure.	
Metric value today (if known)	<i>N/A</i>	
Value type <i>Risk/compliance</i>	Rough value size Choose an item.	By when Over <i>X</i> years

2 Customer / User Problem

Who is impacted? (e.g. customer type, colleague, segment etc)	giffgaff members	
What is their problem today? (2-3 lines max)	<i>N/A</i>	
Why it matters (1 line)	For our members, an unsupported charging platform means facing a high risk of sudden, prolonged mobile service blackouts, incorrect billing, and the inability to buy or renew plans without any vendor fallback to fix the system.	
What proof do you have?	<i>N/A</i>	
Desired Future outcome	<i>N/A</i>	

3 Delivery Outcomes

3.1 Key Capabilities Required

- Describe what must exist – not how in 3-5 bullets.

- **MVP = These requirements must be delivered by the project to achieve the minimum viable customer or commercial outcome*

#	Capability	MVP*
1	Investigate, analyse, and define the requirements and solution for replacing the current Ericsson- based, giffgaff-owned Online Charging System (OCS) from the Dublin data centers by joining the Virgin Media O2 (VMO2) charging platform powered by Matrixx. This strategy must support giffgaff's total subscriber volume of 4.5 million members in 2026 while steering toward the company's e2e state target architecture hard deadline of October 2028. Existing and planned capabilities proved by Ericsson OCS that are actively used in providing products and services to giffgaff members must be supported by the Matrixx solution.	Y
2	The migration of the 4.5 million customer base (and their products/balances) from the Dublin data centers to the VMO2 Matrixx system must execute via a controlled, multi-phase migration sequence (TBC) to ensure no disturbance to any of the members' services prior the hard deadline of October 2028.	Y
3	Support giffgaff with the delivery of the OCS replacement by Matrixx solution.	Y
Reporting / Analytics Requirements		
1	Migration related reports: • Migration Execution Reporting to track progress during migration • Reconciliation Reporting to validate the end-to-end data integrity of the data • Post-Migration Validation Reporting to ensure that the platform operates correctly after migration by validating amongst others charging, performance, and end-to-end customer journeys and • Exception & Audit Reporting to capture an audit trail of all migrated data, highlighting failed or manually adjusted records, and supporting regulatory and financial reporting requirements.	Y
2	Real-time CDR stream from Matrixx into giffgaff systems for real-time giffgaff fraud detection, BI and finance reporting.	Y

3.2 Operational Impacts

Channel	Core domains / functions
☐ Digital / App ☐ Retail ☐ Care / contact centre ☐ Messaging ☐ Indirect	☐ Sales / shop / basket ☐ Order & fulfilment ☐ In-life service / management ☐ Billing / payment / finance / insurance ☐ Fraud management ☐ Customer data / Identity ☐ Network connectivity ☐ Mobile Devices / CPE / STB ☐ Wholesale partners ☒ MVNO

3.3 Complexity drivers

Please mark any that apply as these will improve the accuracy of your estimate – and avoid an under or over estimation of cost and time to deliver.

☒ Data or customer migration is required between suppliers or systems ☐ Decommissioning of legacy systems or suppliers ☐ New suppliers or systems introduced ☒ High transaction volumes >100k per month ☒ Realtime/sub-second response required ☒ Regulatory/compliance critical ☒ Security/fraud sensitive ☒ Customer critical journey (e.g. sales, faults, billing, payments)
Further information:

3.4 Timing

Target live date or window	Drop dead date of October 2028
Why this date matters	The current OCS is nearing the end of vendor support date, leaving any future issues or required changes exposed to significant operational, regulatory and financial risk with no assured resolution. Remaining on this platform increases the likelihood of service instability, higher maintenance costs, and challenges in meeting compliance and scaling needs. On the other hand, if a decision is made to move away from the Ericsson OCS-based solution to MAtrix, any extension of the existing platform required due to delays in the Matrix migration would incur significant costs that giffgaff would absorb. Transitioning from the current Ericsson OCS is essential to ensure long-term platform

	sustainability, regulatory alignment, and architectural consistency. This move also enables alignment with VMO2 standards and frameworks, ensuring compliance with required technology and assurance standards (TSA v2).
--	--

3.5 Constraints and Dependencies (Max 3)

Key constraints	OCS end-of-vendor-support
Known dependencies <i>(optional, if known)</i>	- The migration of the OCS platform to Matrixx must complete by October 2028 - Dependency on VMO2 and Matrixx teams for delivery

4 Ownership / Budget

Proposer	Colin Woods
Sponsor <i>(if known)</i>	Stephen McDonald
Budget planning reference <i>(if known)</i>
